

ALLOY II EXTENSIONS

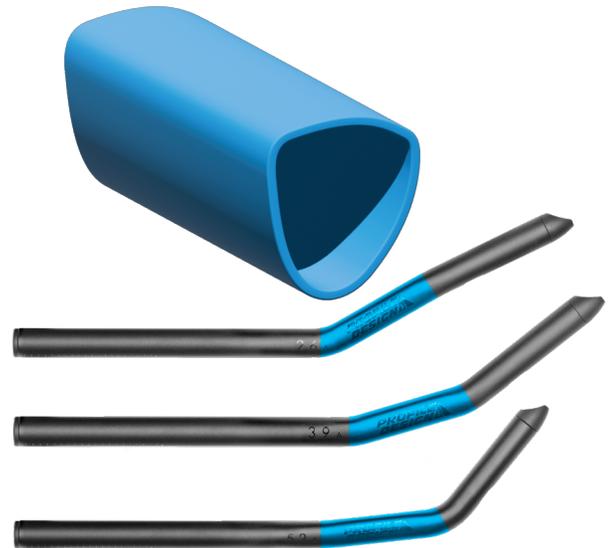

(26A, 39A, 52A)

The 52a, 39a and 26a are the newest versions of our reliable aluminium extension range.

Aero Shaped

The Alloy II extensions feature a new "Aero Shaped" section

The update has primarily aimed for consistent ergonomics. All models have the same:

- + Rise
- + Offset
- + Inflection (first bend) point
- + Grip length

Of course, we didn't forget the importance of aerodynamics – adding Kamm shaping to the rise section.

Compared to the outgoing models, the corresponding new versions are:

- 45/25a -> **26a**
- 35a & 43a -> **39a**
- 50a -> **52a**

Product Details

Construction	Alloy
