

MEZZO CAGE POD TIPS

- Use the felt pouch to help dampen rattling noise.
- **MEZZO CAGE POD** may not fit all tubular tires. You will not be able to use 22mm thick tires as they are too large.
- In order to fit a tubular tire and Pit Stop into the **MEZZO CAGE POD**, you must fold the tubular tire and then push the center of the tire out. The tire leaves a concave impression in which the Pit Stop can then be placed into.

Securing Your New CAGE POD

To help prevent launching, be sure to use a cage that has a top hook which securely holds the cage pod in place. Use the included rubber band. Using band as instructed will increase grip force by 7 lbs.

Directions : Place rubber band around pod. Ensure rubber band sits directly under top cage tab as seen in picture.
