

RAVEMEN

Rear Light with Eye-catching Warning Flash by Light Sensor

CL05 is a lightweight and easy-to-use rear light. Featuring two rings of COB LEDs and built-in sensor, it provides max 30 LED lumens on warning flashing mode, great for urban riding and commuting on busy traffic road.

By laying out the COB LED in two rings, CL05 provides a larger lighting area and creates more significant visibility for riders. When detecting headlights (>50lux) of approaching vehicles from behind, the light sensor will activate the warning flashing mode to boost the rider's visibility to maximum.

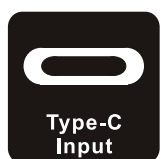

With the flexible rubber strap mount and easy-to-use mounting clip, CL06 could be mounted to round and aero seatpost or clipped to some compatible saddle bags or backpacks directly. The light is designed with battery indicator and charging indicator and you can charge the light easily via the USB Type-C connector.
